Six Months with AMD Strix Halo

Local AI, Open Source, and Hardware Reality

A Six Month Review of a Strix Halo Rig

AMD Strix Halo | Local AI | Home Assistant | 3D Modeling | Open Source

winmutt | June 2026
github.com/winmutt

What We're Covering

Section 1: The Hardware Stack

- Power Consumption: Corsair 300 vs RTX 5090 vs Cloud
- The Hardware: AMD Ryzen AI Max+ 395 APU
- The Stack: ROCm + Lemonade Server
- Issue #1070: Core affinity across dual CCDs

Section 2: Projects & Applications

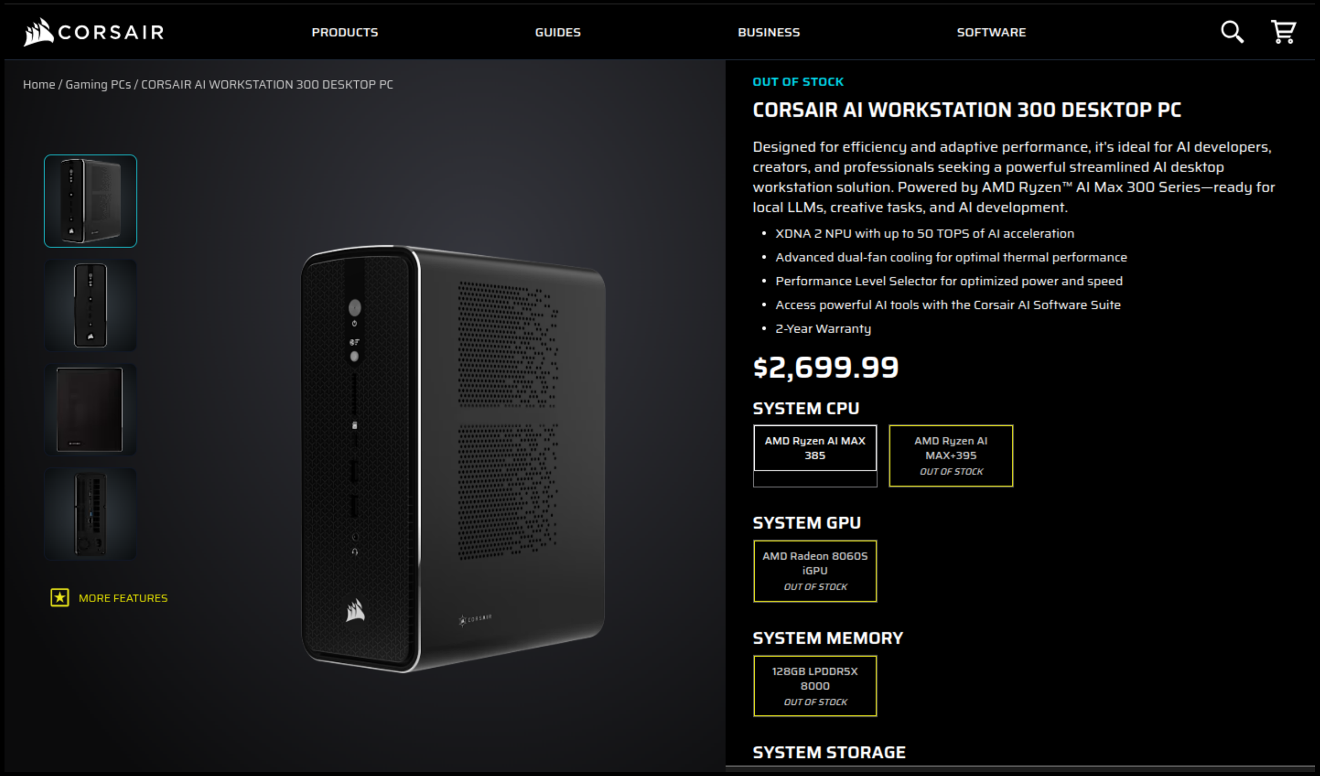
- Home Assistant: Cutting the Alexa cord
- 3D Modeling: AI to concrete signs
- Project WWS: Remote workspace provisioning

Section 3: Open Source Journey

- Lessons Learned: What worked, what didn't
- Key Insights: 8 takeaways from 6 months
- OSS Contributions: 3.5x increase
- 26 Years: From LKML 2000 to Strix Halo

The Hardware: AMD Ryzen AI Max+ 395

Corsair AI Workstation 300



System Internals

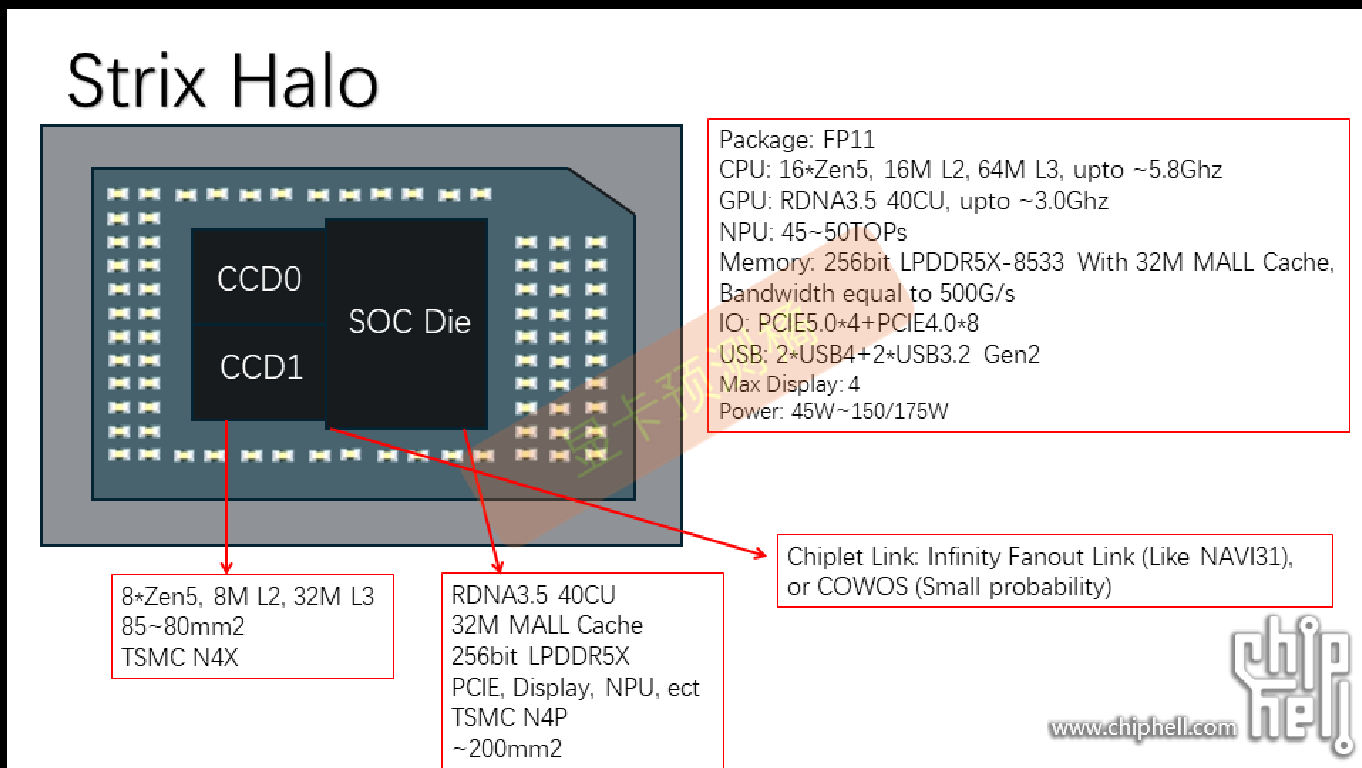
Physical Layout

- 16 cores (12 performance + 4 efficiency)
- 2x Core Complex Dies (CCD) with 32MB L3 cache each
- 768KB L1d + 512KB L1i + 16MB L2
- Integrated RDNA 3.5 GPU (40 Compute Units)
- 128GB LPDDR5X-8000 unified memory (soldered)
- Source: Corsair AI Workstation 300, AMD Ryzen AI Max+ 395 teardown (Chiphell)

APU Die Architecture

Component Breakdown

- AMD Radeon 680M GPU: RDNA 3.5, 40 CUs, ~4.6 TFLOPS
- AMD XDNA 2 NPU: 50 TOPS AI acceleration
- 2x CCDs with separate 32MB L3 caches
- 128GB LPDDR5X-8000 unified memory
- Source: AMD Ryzen AI Max+ 395 specifications



Power Consumption & Performance

System Power Comparison

System	Power Draw	Notes
AMD Strix Halo (Corsair 300)	~300W	Single APU, 128GB unified memory
RTX 4090 Setup	~600-800W	GPU (450W TDP) + CPU + system
RTX 5090 Setup	~800-1000W	GPU (600W TDP) + CPU + system
Commercial AI Server	1500-3000W	Multi-GPU (A100/H100: 400-700W each)

Strix Halo: ~300W vs RTX 5090: ~800-1000W vs Cloud Servers: 1500-3000W
Source: Corsair specs, NVIDIA TDP ratings, TechPowerUp benchmarks

FastFlowLM NPU Performance

- 6784 tokens prefill in ~15 seconds (~455 tokens/sec)
- Chunked processing: 4096 + 2688 tokens
- End-to-end (prefill to response): ~16.2 seconds
- Source: FastFlowLM logs (lemonade-server, June 2026)

Query Performance Timeline

- Nov 2025: 45 TPS (400k context, initial) → 14 TPS (200k, tuned)
- Dec 2025: 284 TPS prompt eval, 46 TPS generation
- Jan 2026: 2x faster after AMD GPU library update
- Feb 2026: 24 TPS single-threaded
- May 2026: 18.65 TPS @ ~200k context (37.8 min TTFT)
- Source: PERFORMANCE_DATA.md, lemonade telemetry

The Hardware Investment

Black Friday 2025 Deal

• Corsair 300 AI Workstation: **$1800** (128GB Strix Halo system)
• Sold NVIDIA RTX 3060 rig to fund the purchase
• Today's equivalent: ~$3000+ (RTX 4090 configurations)
The Verdict: "The Strix Halo was a bargain at $1800 for what it delivers - today you'd pay 2x that for equivalent performance with discrete GPU"

Feat #1070: [enhancement] Core affinity when running multiple models.

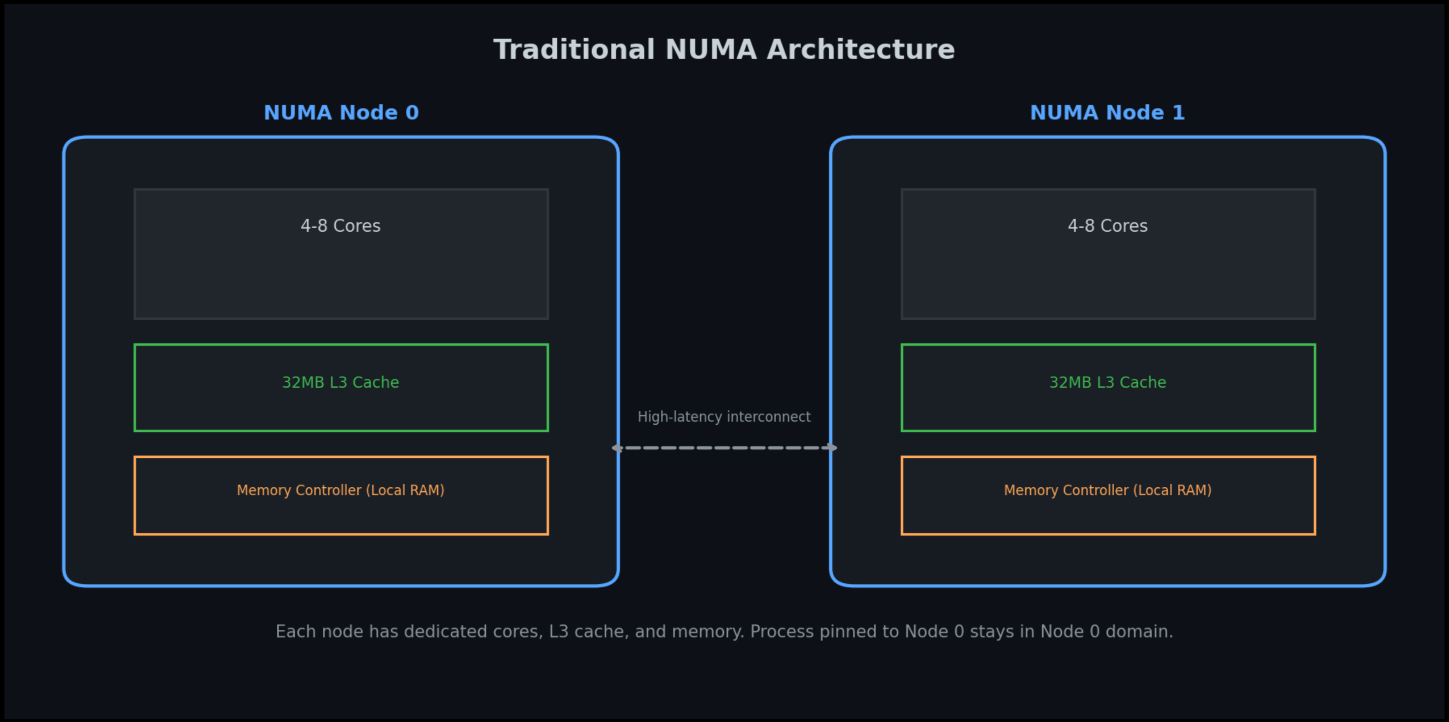
Hardware Reality

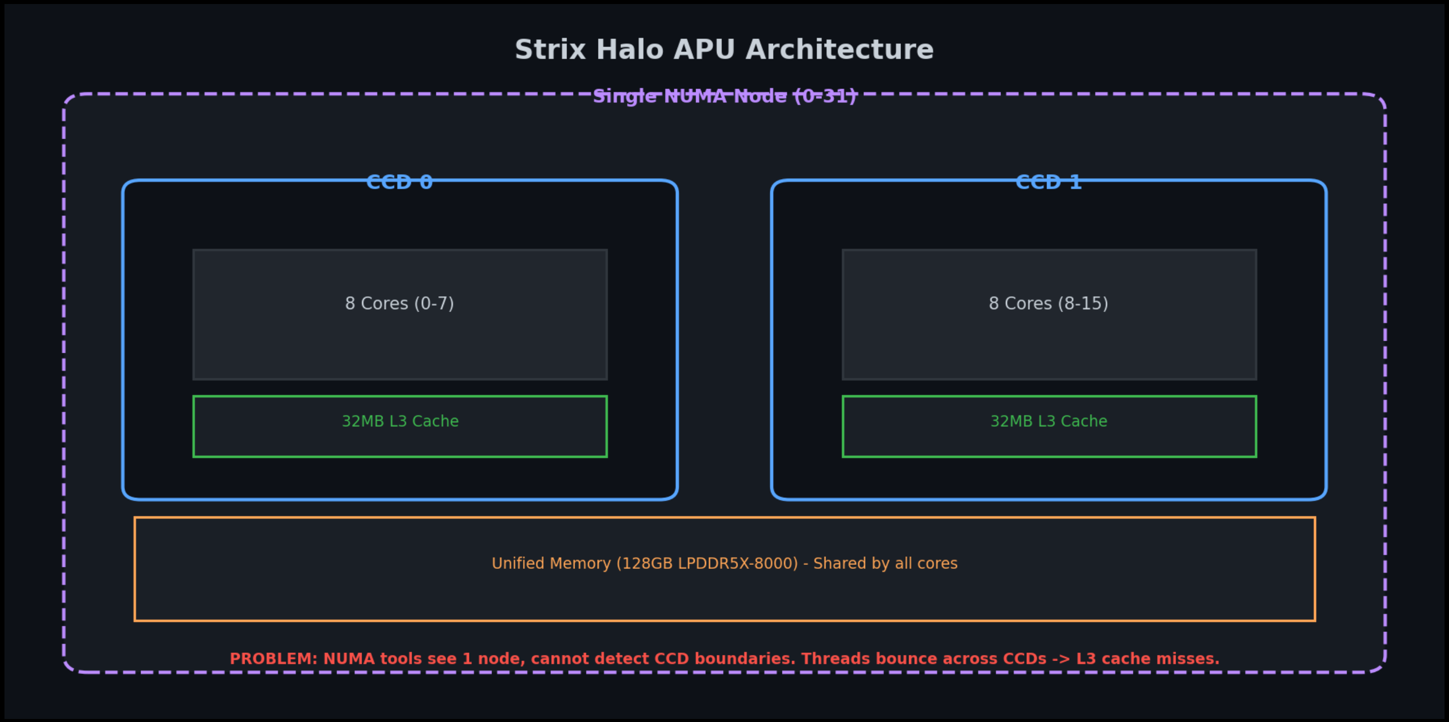
- One processor, but 2x core dies (CCDs) with separate 32MB L3 caches
- Traditional NUMA: 2 nodes, each with own cores + L3 cache
- Strix Halo: Single node, but 2 CCDs with separate L3 caches

Traditional NUMA Architecture



Two separate nodes, each with own cores + L3 cache

Strix Halo APU Architecture

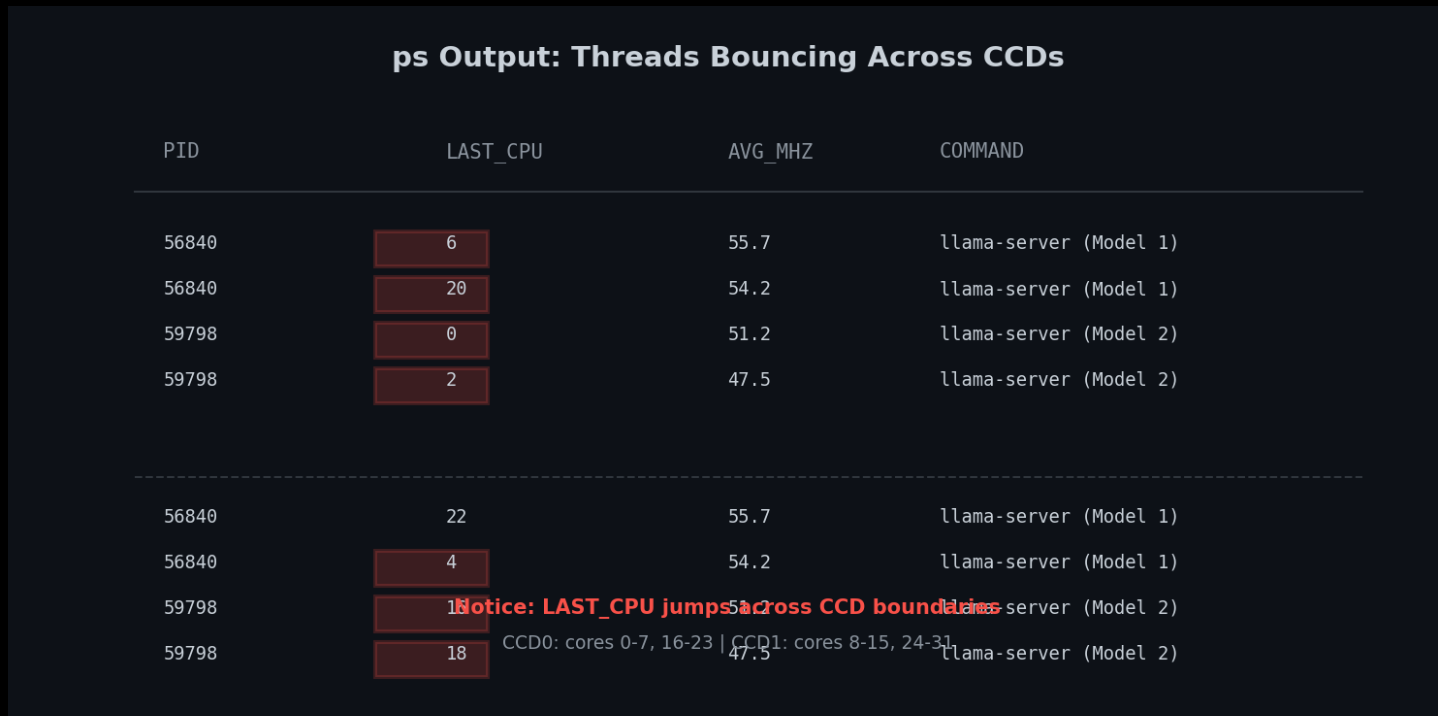


Single node, but 2 CCDs with separate L3 caches

The Problem: NUMA Tools Can't See CCD Boundaries

• Traditional NUMA tools detect only 1 node, not 2 CCDs
• Manual core pinning required
• Threads bounce across CCDs → L3 cache thrashing
Solution: Manual core pinning per CCD → no cross-CCD traffic

Evidence: Threads Bouncing Across CCDs



ps output shows threads with varying CPU affinities

Evidence: Hardware Topology

lscpu Output: CCD Topology

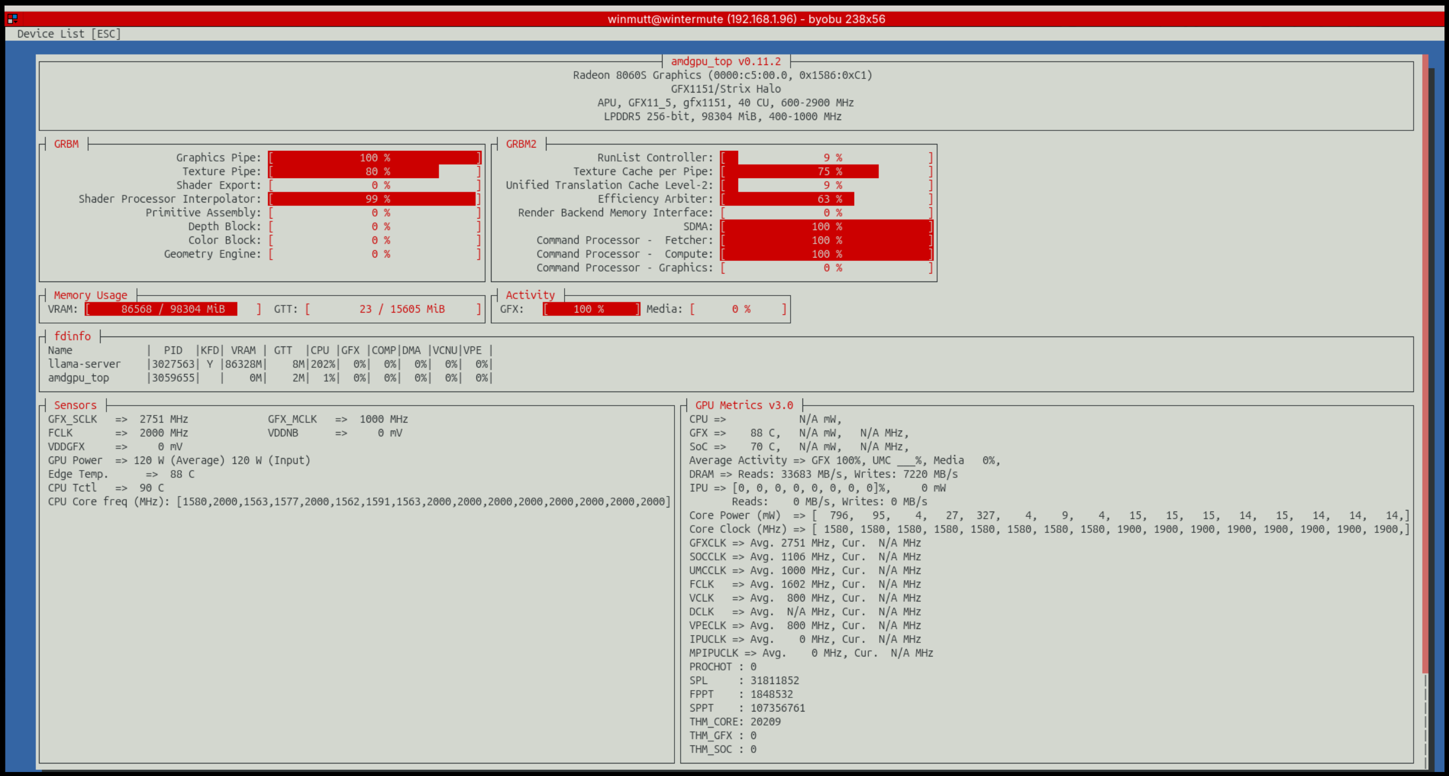
CPU	NODE	CORE	L3	MAXMHZ	AVG_MHZ
0	0	0	0	5187.0	4937.8
1	0	1	0	5187.0	2000.0
2	0	2	0	5187.0	4909.0
3	0	3	0	5187.0	4904.9
4	0	4	0	5187.0	4889.9
5	0	5	0	5187.0	4845.2
6	0	6	0	5187.0	4882.0
7	0	7	0	5187.0	4950.4
8	0	8	1	5187.0	2000.0
9	0	9	1	5187.0	2000.0
10	0	10	1	5187.0	2000.0
11	0	11	1	5187.0	2425.1
12	0	12	1	5187.0	3056.8
13	0	13	1	5187.0	4661.1
14	0	14	1	5187.0	2000.0
15	0	15	1	5187.0	2000.0

L3 Cache + AVG_MHZ: Shows load shifting across CCD boundaries

NUMA tools see: 1 node (0-31) | Reality: 2 CCDs with separate L3 caches

lscpu shows 2 CCDs but NUMA tools detect only 1 node

Evidence: GPU Utilization



amdgpu_top showing RDNA 3.5 GPU utilization

Cutting the Alexa Cord

LineageOS on Echo

December 2025
Started exploring XDA Forums for Echo device hacking

The Process:

1. Unlock bootloader via amonet exploit

github.com/R0rt1z2/amonet

2. Install TWRP recovery
3. Flash LineageOS 18.1 (Android 11)
4. Configure ViewAssist for Home Assistant

dinki.github.io/View-Assist

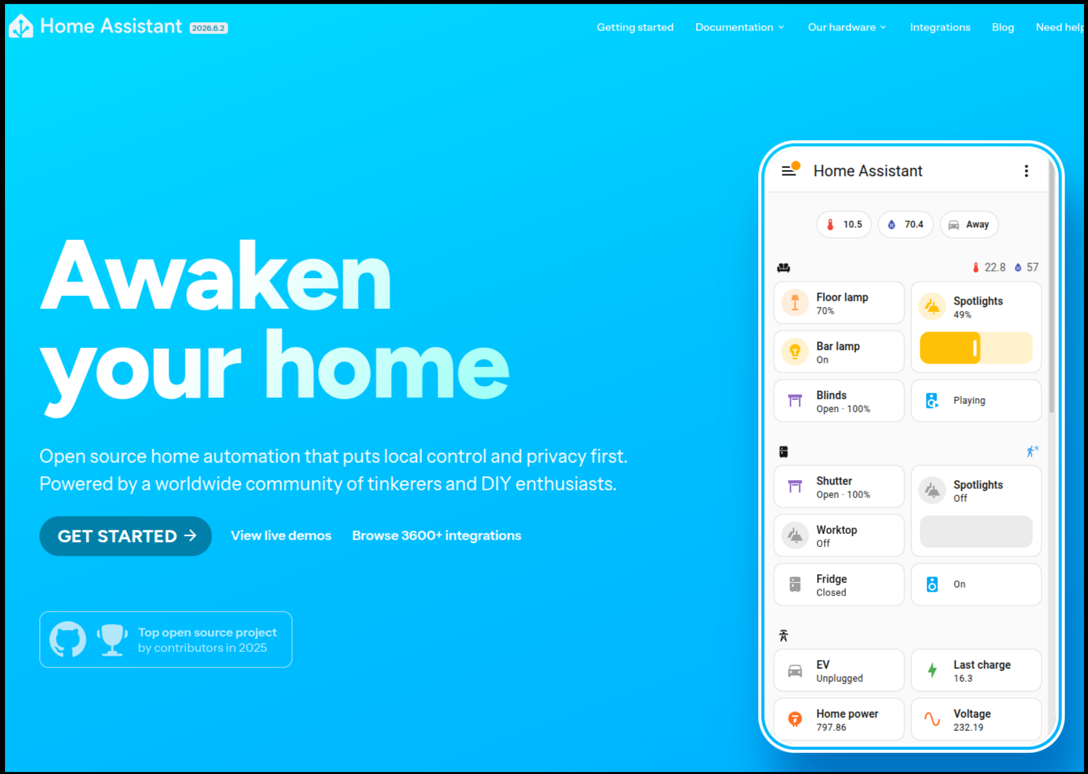
> ***Philosophy***
> *"Basically anything with a USB port. If there is a port, there is a way."*

Alexa Replacement Timeline

Dec 6	Started exploring XDA forums
Dec 7	HA running on Echo devices
Jan 19	HA setup on Echo Show Gen 2
Jan 21	Everything works (except wake word)
Jan 25	Hey Jarvis to the rescue
Jan 29	End-to-end complete
Jan 7, 2026	Issue #4: Echo 8 mic dies after 24h
Feb 2026	Still debugging (it's fine)

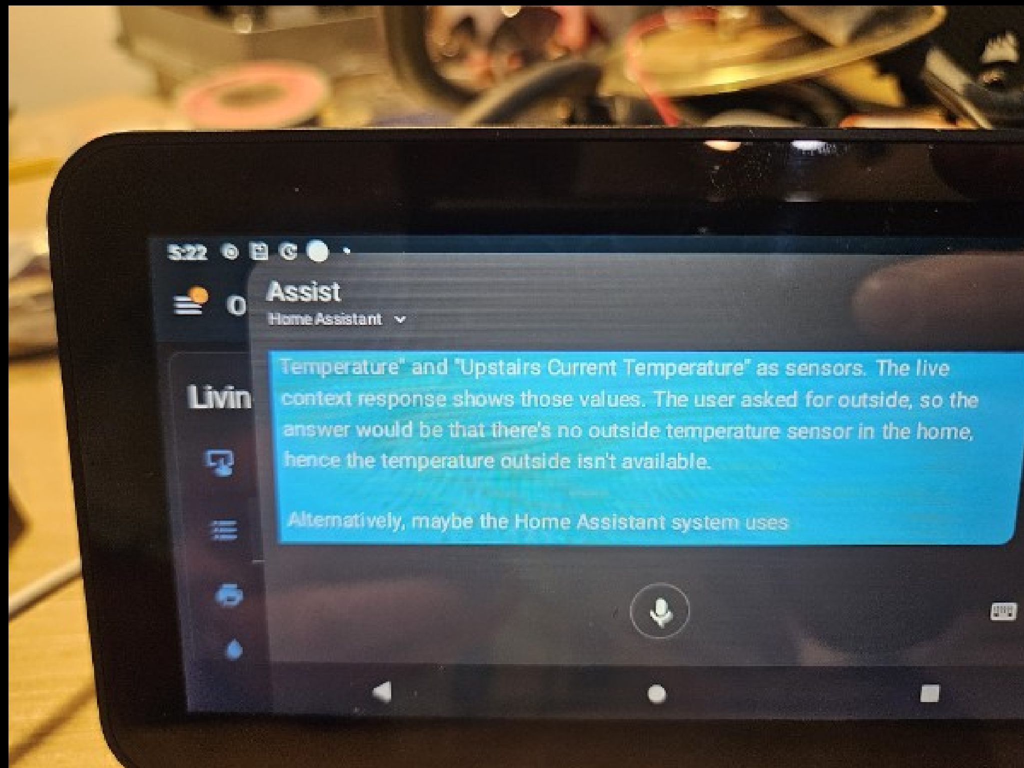
Home Assistant Dashboard

The best open source project I have seen



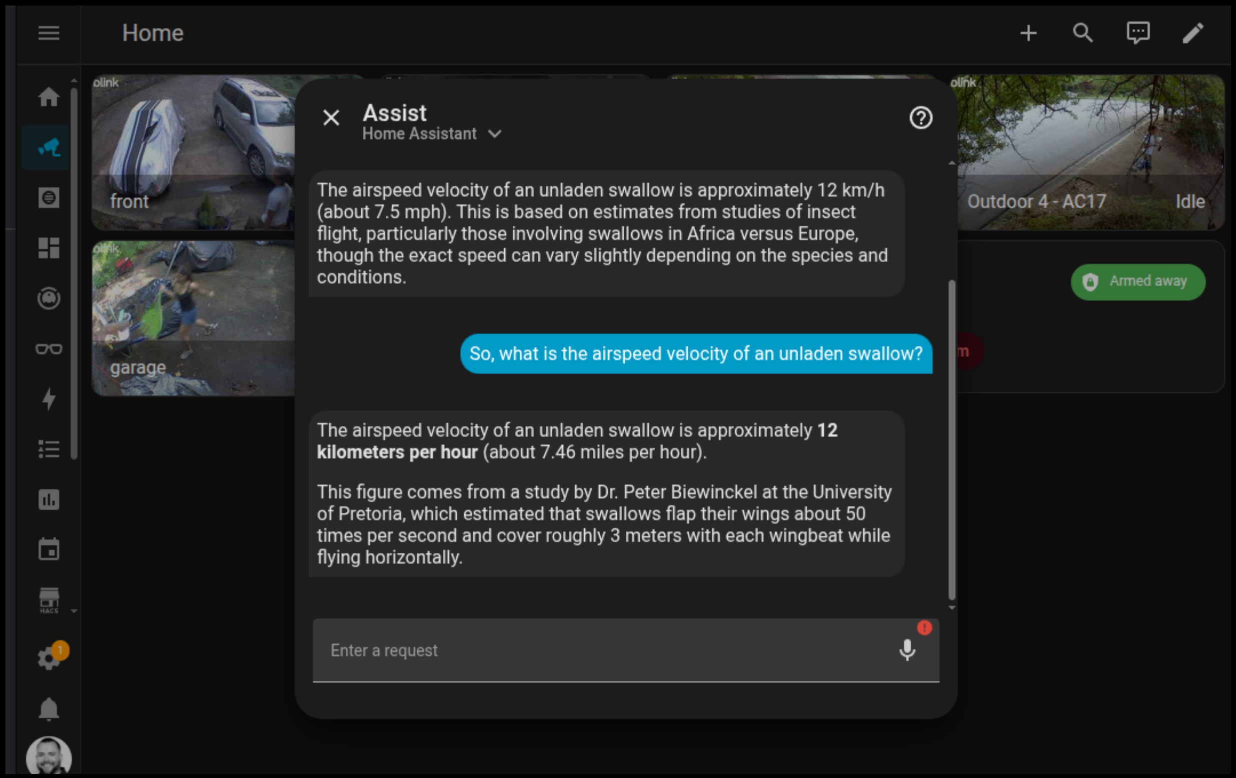
Complete home automation control from local hardware

Home Assistant on Echo Show



LineageOS + ViewAssist on repurposed Echo Show

Home Assistant Setup



Complete dashboard with lights, climate, and automation

LineageOS Device Compatibility

Echo Show Devices Supported

Device	Codename	SoC	XDA Thread
Echo Show 5 (1st Gen 2019)	checkers	MT8163	xdaforums.com/t/rom-unofficial-11-checkers...
Echo Show 5 (2nd Gen 2021)	cronos	MT8163	xdaforums.com/t/rom-unofficial-11-cronos...
Echo Show 8 (1st Gen 2019)	crown	MT8163	xdaforums.com/t/rom-unofficial-11-crown...

All devices use MediaTek MT8163 SoC

LineageOS 18.1 (Android 11) - community builds by @R0rt1z2

Issue #4: The Echo 8 Mic That Quit

Audio stops working after ~24 hours

Filed
January 7, 2026
Repository
https://github.com/amazon-oss/releases/issues/4
Status
Open (still waiting, it's fine)

The Problem

• Echo 5: Stable for days

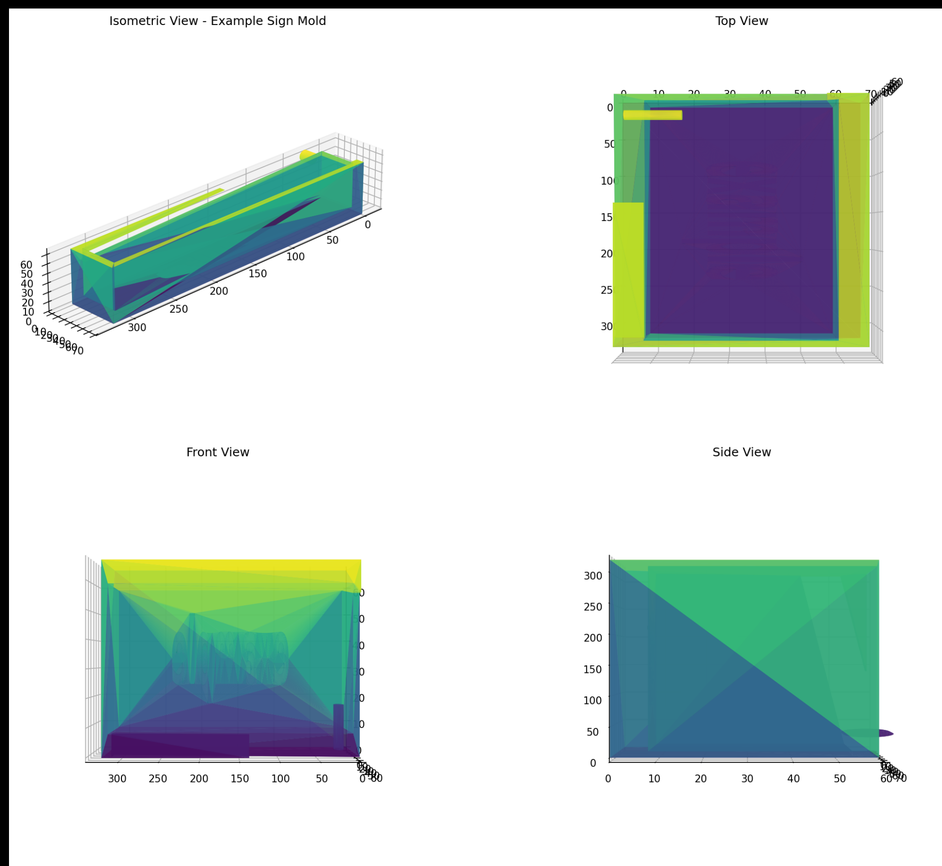
• Echo 8: Dies after ~24 hours

• *Root cause: Unknown (yet)*

Blender: Concrete Sign Mold Design

AI-Assisted Physical Design

Blender + AI workflow for creating physical objects



The Process

1. AI generates Blender design
2. Export to STL
3. 3D print mold
4. Create silicone mold
5. Cast concrete

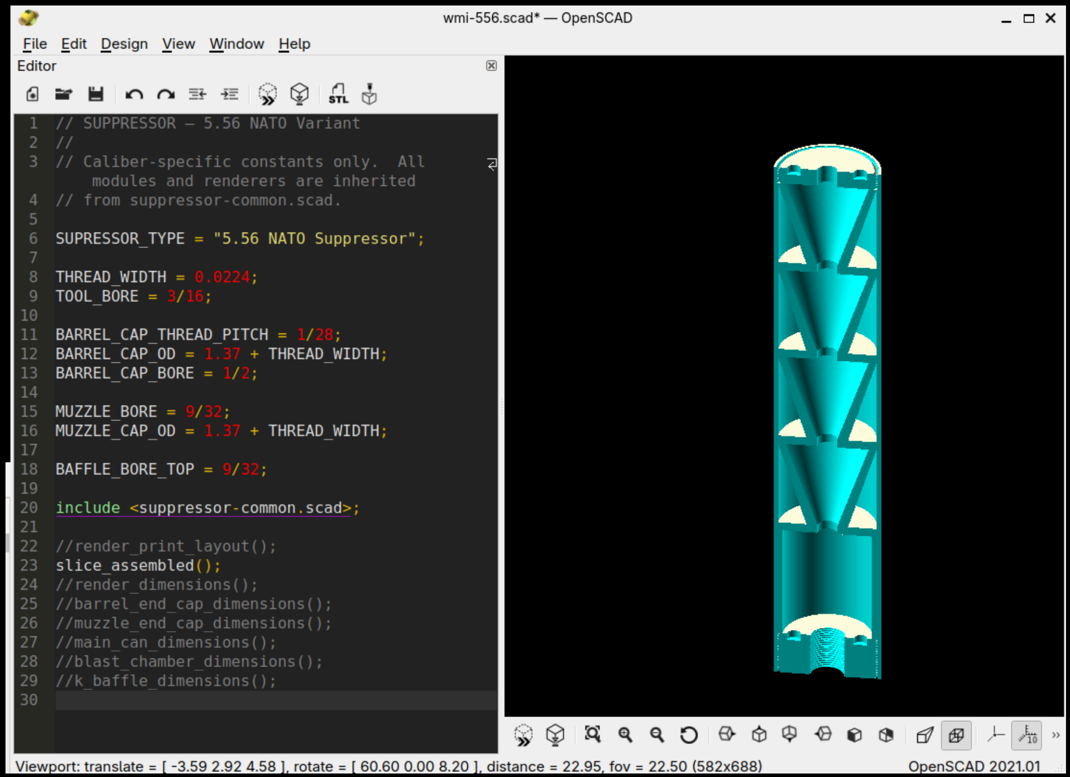
December 1, 2025 — More physical projects coming soon

OpenSCAD: Where Things Work

wmi002 Session — Precision Engineering

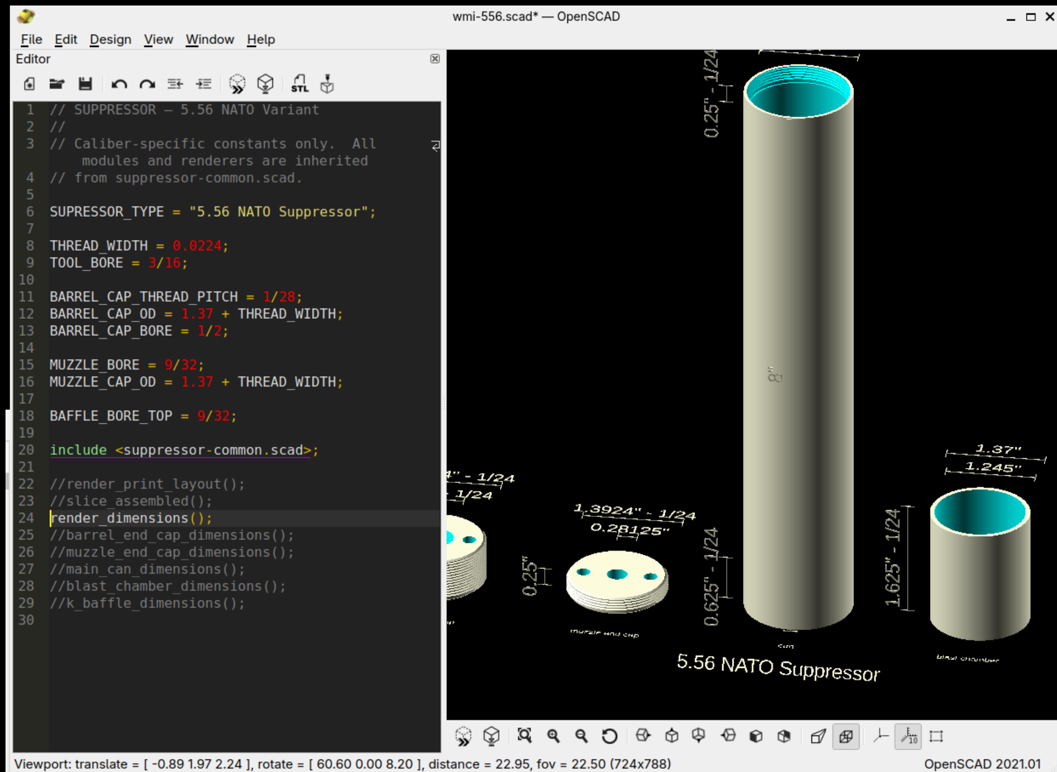
Success Story
• Parametric design: Caliber-specific constants (.308 Winchester, 5.56 NATO)
• Modular architecture: include , (BOSL2)
• Precision engineering: Thread pitches (5/8-24 UNF), bore dimensions, tolerances
• Working output: K-baffles, blast chambers, threaded end caps

K-Baffle Assembly (Internal View)



Internal frustum design for optimal acoustic performance

Dimensioned Parts View



Precision tolerances for .308 Winchester and 5.56 NATO

Two Approaches to Physical Design

OpenSCAD: Precise, documented, working. Blender: Vibe-based, hopeful.

Project WWS: I Vibe-Coded an Entire System

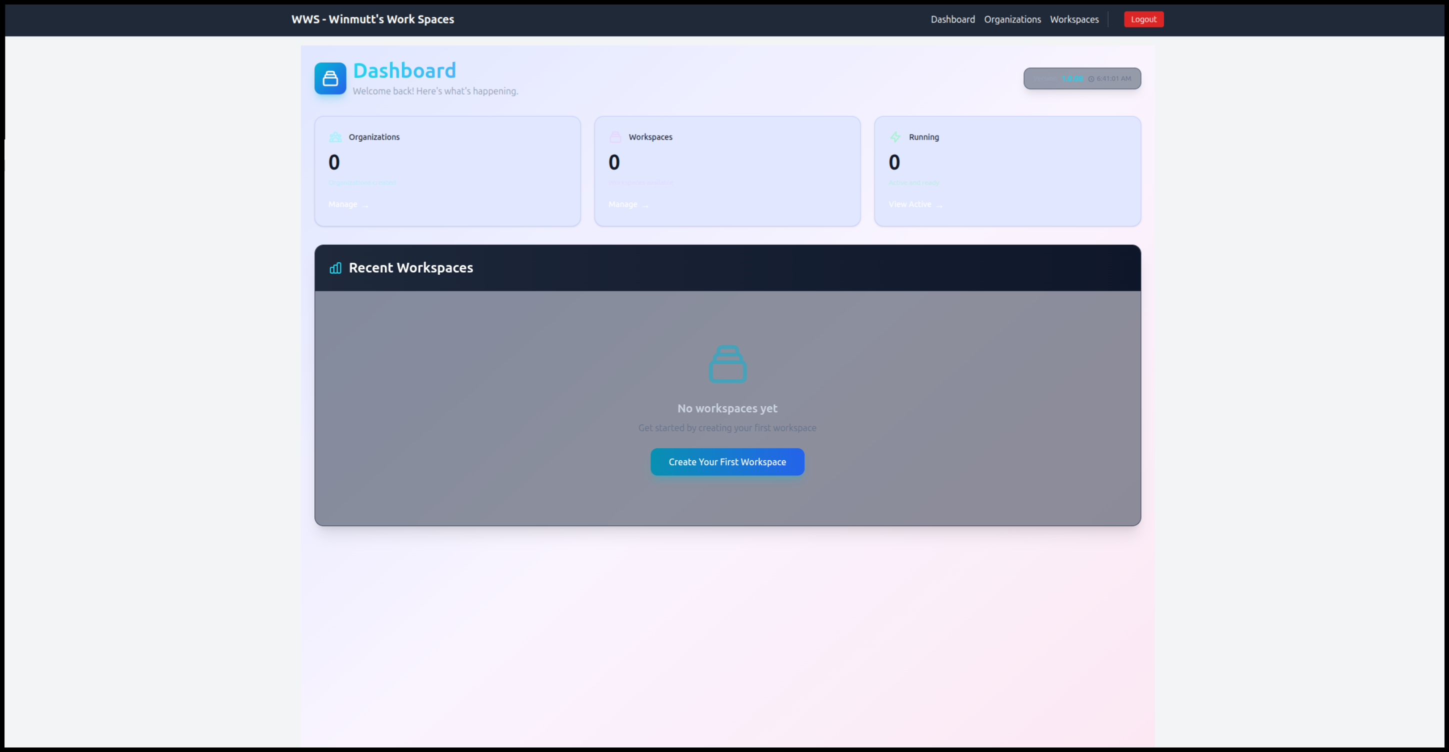
Winmutt Work Spaces — github.com/winmutt/wws

> ***May 12, 2026***
> *"Definitely no Athena and its taken months to get there but this is something I entirely vibe coded."*

Remote workspace provisioning with KVM/Podman isolation

code-server (VSCode in browser) + GitHub OAuth + RBAC

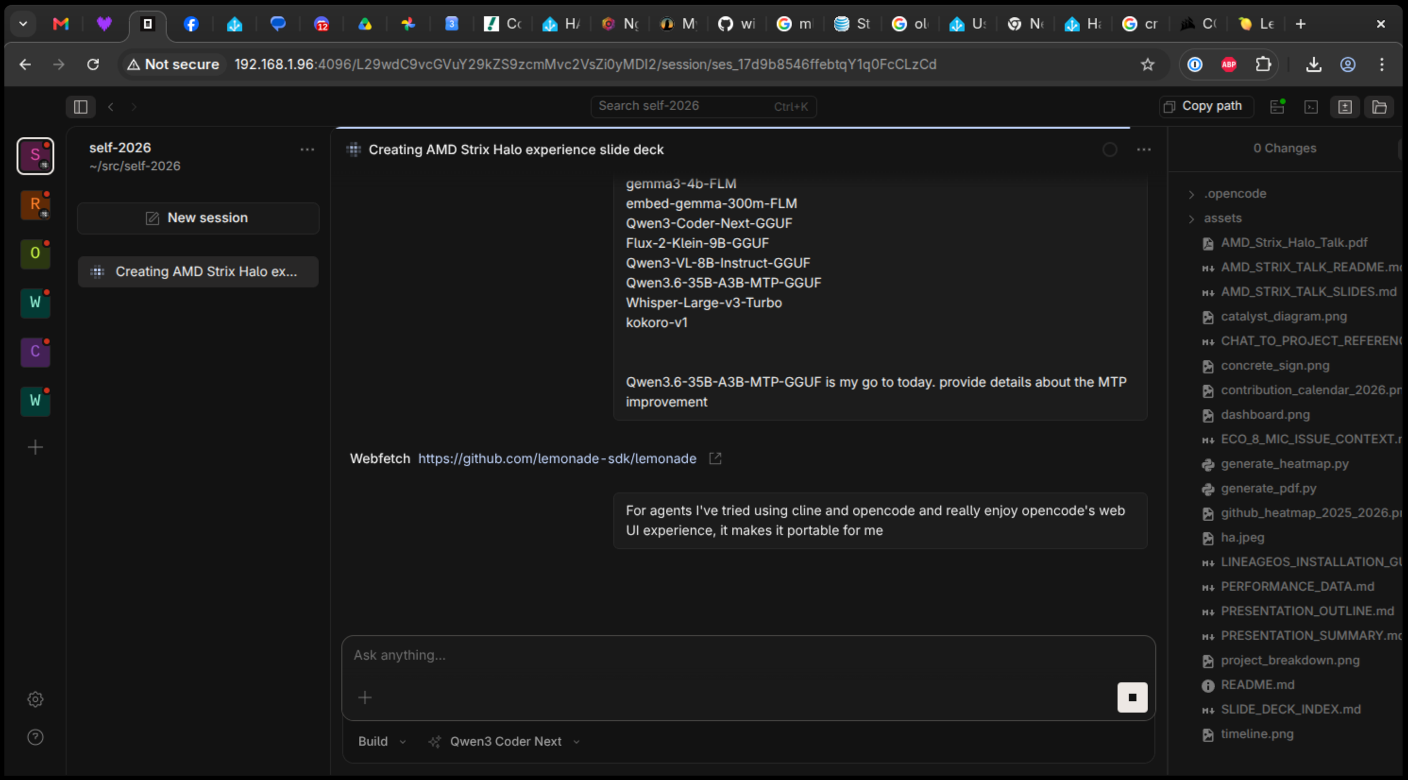
First commit: Feb 22, 2026 → Production: May 12, 2026



AI Coding Editors: My Daily Drivers

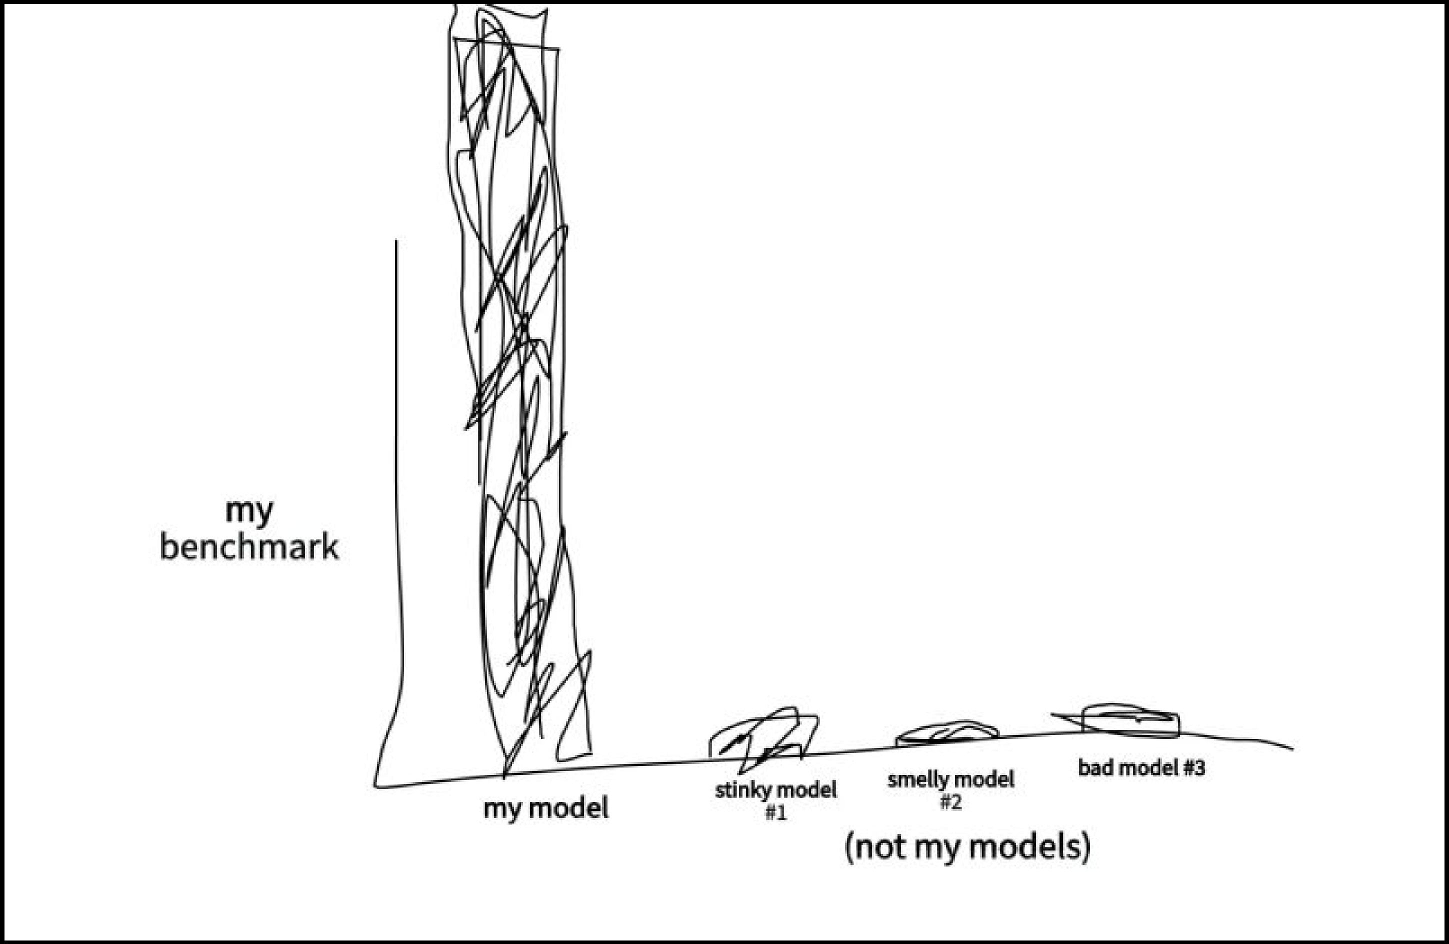
Editor Comparison

- Opencode: TUI, subagents, fast iteration
- Cline: VSCode extension, autonomous workflows
- Aider: CLI, git-integrated
- Source: Personal workflow (2026)



Which Models?

Model Comparison Chart



Qwen3-Coder, Qwen 3.5, and Llama models for different use cases

Models in Use

Qwen3-Coder (Primary Coding Model)

- Context: 400k window, ~59GB memory usage
- Use Case: Autonomous coding, WWS project development
- Stability: Stable after tuning
- Quote: "Making some really good results"

Backend Evolution: Lemonade → Ollama

Backend	Pros	Cons
Lemonade (llama.cpp + ROCm)	NPU support, AMD GPU optimized	Instability, NPU "coming soon"
Ollama	Stable, easy to use	GPU crashes after OS upgrades
llama.cpp (direct)	Prompt caching (Mar 2026), control	Manual setup

Nov 28: Lemonade → Dec 7: Ollama → Dec 14: GPU crashes → Mar 11: "Things really humming"

Lessons Learned (Mostly)

What Worked ✓

- Cline + Qwen3-Coder: Actually produces code
- Prompt Caching: Things hum now
- AMD GPU Libraries: 2x faster (worth the pain)
- WWS Project: Vibe-coded from Feb 22 (first commit) to May 12
- Home Assistant: Alexa is dead, long live OSS

What Didn't ✗

- Memory: 32GB reserved for Lemonade/llama.cpp/opencode
- Ollama: Still crashes after updates
- NPU: Coming soon™ (always)
- Context >64k: TPS drops like a stone

1. Hardware hype ≠ reality (APU challenges are real)
2. Software maturity: bleeding edge = bleeding fingers
3. Context > everything (prompt caching is life)
4. AI coding > traditional IDEs (for me, anyway)
5. AI → physical objects (concrete signs, apparently)
6. Echo → Home Assistant = OSS win
7. Autonomous dev: possible, painful, worth it
8. Buying hardware got me back in open source

26 Years of Open Source (2000-2026)

From LKML to Strix Halo: How Hardware Bought My Time

The Long Detour

For 20+ years I built corporate SaaS products. Cloud disconnected me from the metal. Linux became something I deployed to, not something I touched daily. The kernel, the drivers, the hardware—left that world behind. Then Strix Halo arrived and changed everything.

June 9, 2000: Asking on LKML

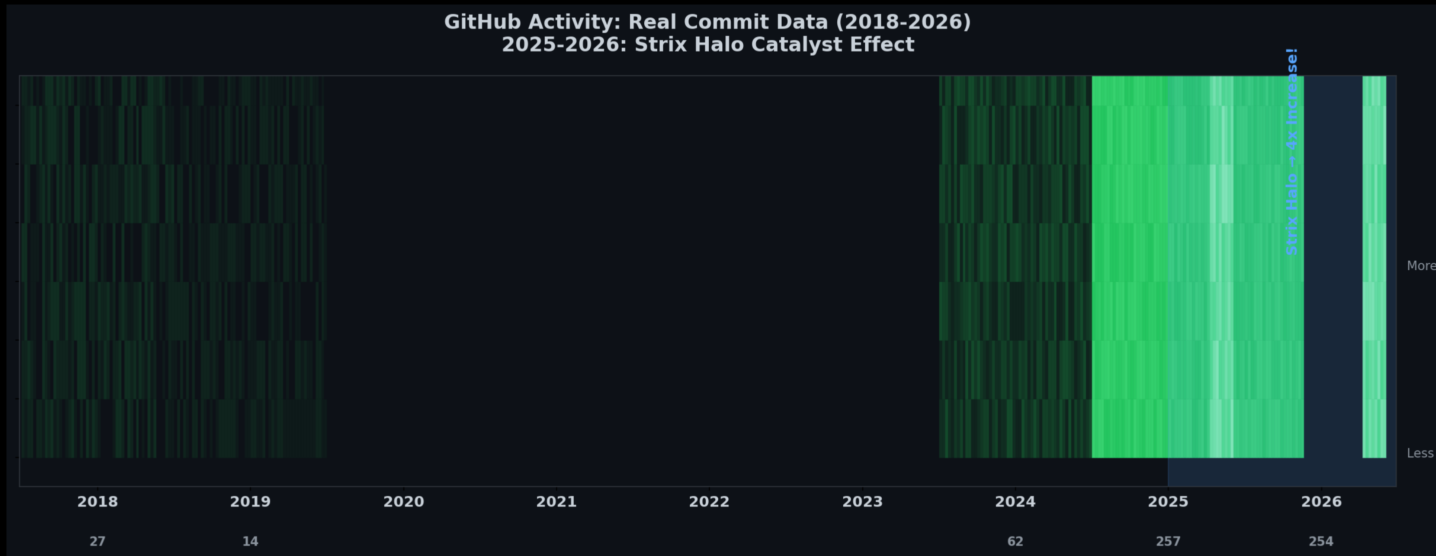
```
From: Rolf Martin-Hoster (winmutt@hotmail.com)
Date: Thu Jun 08 2000 - 19:24:59 EST
Subject: HighPoint IDE RAID (kernel 2.2.14)

Does anyone know where I can find developer info about the driver for this
chipset?

-Rolf
```

Back then: Hands-on with kernel 2.2.14, digging into IDE RAID drivers, asking questions on linux-kernel mailing list.

The Return: GitHub Activity (2018-2026)



2018-2024: Ghost town. 2025: Strix Halo arrives. November 2025: Back on the metal, every single day. AI + local hardware reinvigorated my love for open source.

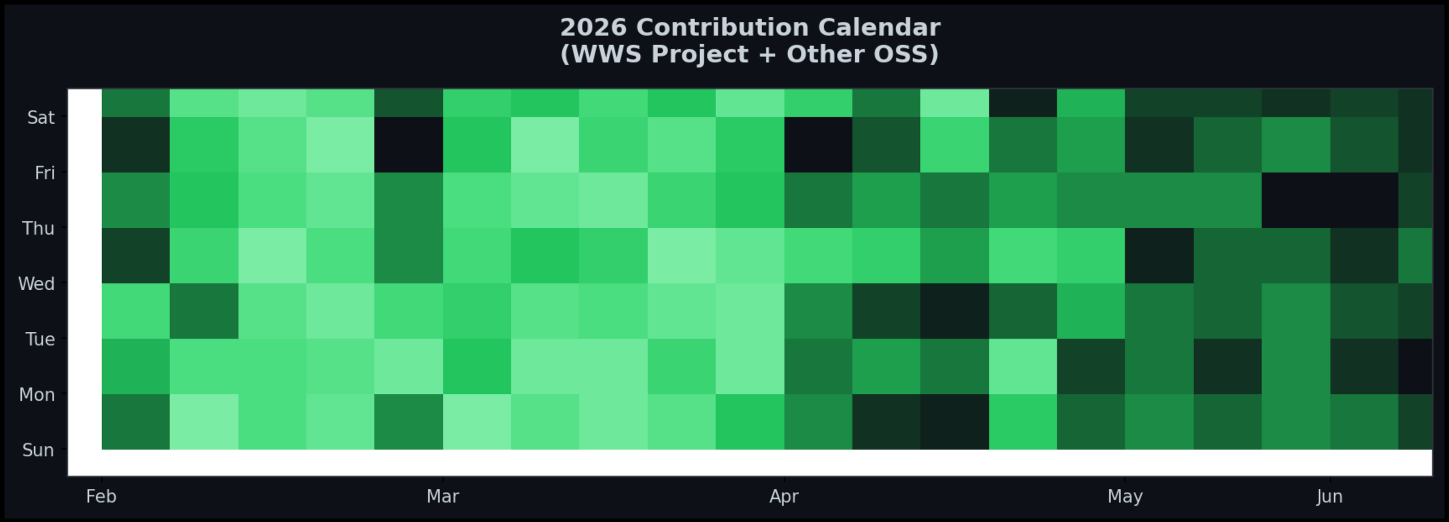
Moral: Sometimes the best way back in is to buy new toys.

How Buying Hardware Got Me Back in Open Source

The Catalyst Effect

November 2025: Bought Strix Halo rig. Local AI reinvigorated my love for OSS. Result: 3.5x increase in contributions.

2026: The Year I Came Back



Contribution Breakdown

- WWS: 38% (remote workspace provisioning)
- Lemonade: 15% (NPU backend, custom NUMA mapping)
- ROCm: 8% (Issue #5926 memory management)
- Home Assistant: 12% (wake words, Echo)

- Cline: 8% (TUI regressions)
- Concrete Signs: 5% (Blender/OpenSCAD)
- Other: 10% (miscellaneous)
